# Trimble Previews WorksManager Software for Civil Construction Easily Manage Data and Technology Assets Across Sites

MUNICH, April 8, 2019 /PRNewswire/ -- Trimble (NASDAQ: TRMB) will be demonstrating its Trimble WorksManager Software, a powerful, cloud-based application that empowers contractors who manage data and technology assets on civil construction sites, at <a href="mailto:bauma\_2019">bauma\_2019</a>. Trimble WorksManager is the next-generation backbone of the Trimble Connected Site ecosystem for managing construction technology that enables contractors to increase efficiency and improve productivity.

"We continue to develop software to support the Trimble Connected Site ecosystem that is more integrated and easier to use than ever before," said Alistair Wells, general manager of Trimble's Civil Engineering and Construction Software Division.
"Trimble is committed to creating innovative solutions that add real value to our customers' operations, and WorksManager will transform the way contractors manage their construction technology."

## **Connecting Civil Construction**

Trimble WorksManager will allow users to wirelessly transfer data such as 3D designs to the construction site without ever leaving the office, saving drive time and money. Supervisors and data managers will be able to ensure that digital assets on the site are using the correct design version, and the designs are being used on the correct machine or data collector. This information will be presented on a user-friendly dashboard showing managers an overview of data and assets. Contractors will be able to see their construction technology in the field in real time to help prevent costly mistakes and rework.

WorksManager will be optimized for the latest Trimble technology and will integrate with the Trimble Earthworks Grade Control Platform, Trimble Siteworks Software and Trimble Business Center.

#### **Availability**

Trimble WorksManager Software will be available for existing Trimble Connected Community users to beta test beginning in April 2019. Customers interested in using the beta version of Trimble WorksManager should contact their local SITECH dealer. The beta preview will run through the third quarter of 2019.

## **About Trimble's Civil Engineering and Construction Division**

Trimble is a leading innovator of hardware and software solutions for civil engineering and construction. Trimble's advanced technologies transform work across the project lifecycle for owners, engineers and contractors. Solutions include planning and design software, precision machine control, site positioning, mobile technologies and real-time connectivity. As part of Trimble's Connected Site strategy, these solutions empower civil engineers and construction professionals to construct with confidence, delivering significant improvements in productivity at every phase of a project—from concept and design to construction and maintenance.

#### **About Trimble**

Trimble is transforming the way the world works by delivering products and services that connect the physical and digital worlds. Core technologies in positioning, modeling, connectivity and data analytics enable customers to improve productivity, quality, safety and sustainability. From purpose built products to enterprise lifecycle solutions, Trimble software, hardware and services are transforming industries such as agriculture, construction, geospatial and transportation and logistics.
