Trimble Announces FedRAMP In Process Status for e-Builder Enterprise Government Edition

FedRAMP In Process Status Solidifies e-Builder Enterprise Government Edition as the Construction Program Management Solution Designed Specifically for U.S. Federal Construction Projects

SUNNYVALE, Calif. , Feb. 23, 2022 /PRNewswire/ -- Trimble (NASDAQ: TRMB) announced today that e-Builder Enterprise Government Edition, a leading cloud-based construction program management solution for owners of capital improvement programs, has achieved FedRAMP In Process status. U.S. federal agencies now have an industry-trusted construction project and program management system available to help safely streamline their infrastructure projects and create valuable efficiencies. The advancement from FedRAMP Ready status to FedRAMP In Process is due to the establishment of the U.S. Department of Energy as an authorizing partner.

Available on the FedRAMP Marketplace, the e-Builder Enterprise Government Edition is an advanced digital construction management system with built-in, federally-approved levels of security controls and compliance features not offered by public clouds. Agencies have been limited in improving their project management performance because of the lack of FedRAMP construction management system options. Now, with e-Builder Enterprise Government Edition, agencies can partner with an industry-leading solution that many of their peers outside of the federal sector have relied on for over 25 years for tracking allocation of funds, real-time project-status updates, cost controls, document management and stringent data security for their capital improvement programs.

"A FedRAMP In Process designation is a major accomplishment for both Trimble and federal builders," said Greg Blackman, general manager, Trimble's Program and Project Management Division. "Achieving this through a collaboration with the U.S. Department of Energy and their reputation as a technology leader in the federal space is an even greater accomplishment. In addition, we will be able to provide e-Builder Enterprise Government Edition on a larger scale as we move into a new era of infrastructure modernization."

FedRAMP is a standardized approach to security assessment, authorization and continuous monitoring for federal government-authorized cloud products and service programs at the low, moderate and high-risk impact levels. The FedRAMP program addresses the security of commercial cloud service providers and helps government officials manage risk in a cloud-based environment.
